Hyderabad, India

Professional Summary

ECE graduate with hands-on internship experience building real-time AI systems at Infosys Springboard. Proficient in Python, C++, SQL, DSA, OOP, and OS fundamentals. Delivered end-to-end pipelines spanning NLP, LLM integration, ETL, and anomaly detection across a full SDLC. Targeting Associate Software Engineer roles.

SKILLS

Languages: C, C++, Python

Core CS: Data Structures & Algorithms (DSA), OOP, OS, DBMS, Computer Networks, SDLC

AI / ML: NLP, Sentiment Analysis, LLM Integration (GPT, LLaMA, Gemini), Anomaly Detection

Database: MySQL, SQL — querying, schema design (IBM SkillsBuild Certified)

Tools: Git, GitHub, Linux, REST APIs, Prophet, Web Scraping

INTERNSHIPS

AI / Software Engineering Intern — Infosys Springboard (Aug 2025 – Nov 2025)

- Engineered 4 core backend modules for a real-time intelligence system using GPT & LLaMA, contributing across design, development, and testing phases of the SDLC.
- Built a Python sentiment analysis pipeline processing 3+ live data sources (~500 records/day) to extract actionable market signals and competitor insights using NLP.
- Designed ETL workflows for multi-source web scraping and data cleaning, reducing manual preprocessing effort by ~40% through pipeline automation.
- Applied z-score anomaly detection on live data streams, triggering automated market alerts and cutting manual monitoring overhead by ~60%.

PROJECTS

Real-Time Industry Insight & Strategic Intelligence System | Python · NLP · LLMs · Prophet · Web Scraping 2025

- Architected a competitive intelligence platform using Google Gemini to monitor competitor activity, market trends, and sentiment in real time.
- Processed unstructured data from news, social media, and public datasets using NLP, sentiment analysis, and time-series forecasting via Prophet.
- Integrated LLM-powered contextual analysis with z-score anomaly detection to surface high-priority strategic alerts.

Algorithm Visualizer | C++ · DSA · Console Graphics

2024

- Implemented 5+ sorting algorithms in C++ with step-by-step console animations, demonstrating low-level programming and optimisation skills.
- Engineered real-time visualisation of comparisons, swaps, and execution flow using graphics.h and console I/O.
- Optimised algorithm logic to handle arrays up to 100 elements with smooth, consistent performance across input sizes.

EDUCATION

B.E. — Electronics & Communication Engineering

Vasavi College of Engineering | CGPA: 9.20 (2023–2026)

Diploma — Electronics & Communication Engineering

JNGP | CGPA: 9.81 (2020–2023)

CERTIFICATIONS & ACHIEVEMENTS

- Google AI Essentials — Coursera, 2025
- Cisco Networking Basics — Introduction to Networks, 2025
- MySQL Certification — IBM SkillsBuild, 2025
- Programming in C — Udemy, 2023
- NCC B & C Certificates — National Cadet Corps
